## For Commercial Growers, Florists, & Home Gardeners

---

We have been in business for over 100 years. The commercial grower is our major outlet, proving the quality of our stock. No seedsman can hope to survive the critical judgment of the trade unless his product consistently delivers satisfaction. We will make you glad you ordered seeds from Burrell. We are Old Fashioned because we care about our customers.

We invite the planting of these seeds in comparison with those obtained from any other source.

### ***WE GIVE YOUR ORDERS IMMEDIATE HANDLING!***

*You are entitled to prompt service and even at the peak of our shipping season we strive to send out all orders on the same day they are received.*

## HOW TO ORDER

Print your name and complete address including correct ZIP Code. Be sure to list the variety you want and where applicable the grade of seed.

Make all money orders or checks payable to BURRELL SEED GROWERS LLC. There is no Colorado sales tax on garden seed. All offerings are subject to prior sale and to price changes without notice. Bags and packing are furnished without charge, except cans.

See pages in front of catalog for terms of sale, postal charts for “Not Postpaid” items and planting information.

### **COMBINED ORDERS**

Where larger quantities are involved, you and your neighbors may pool your orders to obtain quantity prices and also save on transportation costs. For example, you may need 60 lb. of Beans Topcrop and your neighbor wants 40 lb. By requesting us to pack 60 lb. in one bag and 40 lb. in another, you can both purchase at the 100 lb. rate providing the shipment goes to one address.

### **ABOUT TREATED SEED**

If you want treated seed please specify on your order.

### **HANDLING CHARGE \$3.00**

Due to cost of processing orders we must ask customers to add \$3.00 on orders.

***\$30.00 charge on all returned checks***

## ORDERING INFORMATION

**TERMS:** Check, money order or credit card information must accompany ALL orders, as we cannot keep book accounts. Sales F.O.B. Rocky Ford and subject to laws of Colorado.

In lieu of all other warranties, expressed or implied (including any implied warranty of merchantability or fitness for a particular purpose), and all other obligations or liabilities, we warrant to the extent of the purchase price that the seeds we sell are as described by us on our containers within recognized tolerances. Our liability whether contractual, for negligence or otherwise, is limited in amount to the purchase price of the seeds under all circumstances and regardless of the nature, cause or extent of the loss, and as condition to any liability on our part, we must receive notice by registered mail of any claim that the seed is defective within 30 days after the defect in the seed becomes apparent. We are not to be held liable for cost of seed pelleting or any other seed enhancements. Seeds not accepted under these terms and conditions must be returned at once in original unopened containers and the purchase price will be refunded.

**NOTICE:** Farmers/seedsman in Arkansas, California, Colorado, Florida, Georgia, Idaho, Illinois, Indiana, Minnesota, Mississippi, North Dakota, South Carolina, South Dakota, Texas and Washington with required Arbitration/conciliation/mediation. The seed laws of several states including Arkansas, California, Georgia, Idaho, Illinois, Indiana, Minnesota, Mississippi, North Dakota, South Carolina (section 46-21-260), South Dakota, Texas and Washington require arbitration, conciliation or mediation of disputes involving allegedly defective seed before certain legal actions may be maintained against a seller. A complaint (sworn for AR, FL, IL, IN, MN, MS, SC, TX & WA; signed only, GA, CA, ID, ND & SD) must be filed with the Department of Agriculture or Seed Commissioner (IN) or State Plant Board (AR) within such time to permit an inspection of seed, crops or plants (by an arbitration committee - AR, ID, MS & SC). Certified copy of

complaint must be sent by registered mail to Burrell Seed Growers LLC as provided in individual state law. Information about the requirement may be obtained from the State Department of Agriculture.

Under the seed laws of several states arbitration, mediation or conciliation is required as a prerequisite to maintaining a legal action based upon the failure of seed to which this notice is attached to produce as represented. The consumer shall file a complaint (sworn for AR, FL, IN, MS, SC, TX, WA; signed only CA, GA, ID, ND, SD) along with the required filing fee (where applicable) with the Commissioner/Director/Secretary of Agriculture, Seed Commissioner, or Chief Agricultural Officer within such time as to permit inspection of the crops, plants or trees by the designated agency and the seedsman from whom the seed was purchased. A copy of the complaint shall be sent to the seller by certified or registered mail or as otherwise provided by state statute.

Burrell Seeds does not warrant watermelon seed against watermelon fruit blotch expressed or implied. Seed not accepted under these terms and conditions must be returned promptly in original unopened containers for refund of purchase price.

Descriptions and illustrations appearing in Burrell Seed Growers LLC catalogs and on labels represent our products as grown in our Rocky Ford, Colorado trials. Appearance and performance may vary in other geographic locations and under different growing conditions. Please investigate whether differences may be expected in your growing area.

**RETURN POLICY:** No shipping or handling fees will be refunded. Seed orders returned after 10 days from date seed is shipped will be charged a 10% restocking fee. No returns will be accepted after 30 days from date seed is shipped.

**C.O.D. SHIPMENTS:** No C.O.D's

**HANDLING CHARGE:** \$3:00 on all orders. Due to increased costs of processing orders we must ask customers to add \$3.00 on all orders.

**POSTPAID ITEMS:** Postpaid means there is no postage due on that item. Not postpaid means postage must be figured in with the order.

### DAYS TO MATURITY

The number of days indicated to produce vegetables ready for table use would vary from year to year, depending on growing and seasonal conditions. Sizes and quality are influenced, to some extent, by conditions of growth and geographical location. Time given for Cabbage, Cauliflower, Celery, Pepper and Tomatoes is days from setting plants to marketing fruits. Information given is based on average performance rather than on behavior under the most favorable conditions and primarily meant for convenience in comparing earliness and size of variety.

We are not to be held liable for bad weather or growing conditions under any circumstances. Prices subject to change without notice.

## OUR PRODUCTS

---

### ARTICHOKE

#### **GREEN GLOBE Item # 10A**

A perennial requiring long season. Can be started indoors and transplanted to the field in the spring and harvested in the fall. Heads (buds) are 3 to 4 inches in diameter, blunt cone-shaped and deep in green color. Plants 3-5 feet tall. Needs fertile soil. Space plants 36 inches x 36 inches apart for best results.

**Postpaid Pkt. \$2.00 | 1 Oz. \$8.20 | ¼ Lb. \$20.30 | ½ Lb. \$40.30**

**Non Postpaid 1 Lb. \$55.80 | 5 Lbs. \$53.10**

### ASPARAGUS

*A delicious Dish for Spring Appetites. 1 oz. of seed should produce 250 roots. 50 roots are sufficient for a family of four.*

Asparagus seed should be sowed in light sandy soil, early in the spring. Seed 2 to 4 inches apart 1/2 inch deep, in 15 to 24 inch rows. As asparagus germinates slowly, mix in a few radish seeds to mark the row for early cultivation. Roots may be transplanted either the following spring or left in seed bed for two years. Transplant 18 to 24 inches apart to trench 8 to 10 inches deep and wide enough to spread roots out evenly around crown. Cover with 2 inches of soil, packed tightly. Gradually fill the trench as the plants grow. Rows should be 4 feet apart. Rotted manure may be used in bottom of trench. Minimum soil temperature of about 50 degrees Fahrenheit at a 4 in. depth.

#### **MARY WASHINGTON UC 72 Item # 100AG**

A superior asparagus. An earlier, larger and more uniform strain of Mary Washington. The heads tighter, stalk green without purple overcast. A real improvement.

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.40 | ¼ Lb. \$11.70 | ½ Lb. \$21.80**

**Non Postpaid 1 Lb. \$27.30 | 5 Lb. \$26.00**

#### **UC 157-F2 Item # 104AG**

Very early maturing. Dark green, smooth round spears. Tends to cluster 3-5 spears at a time.

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.50 | ¼ Lb. \$12.20 | ½ Lb. \$22.90**

**Non Postpaid 1 Lb. \$29.00 | 5 Lb. \$27.60**

### BEANS

*1 oz. of seed should produce 250 roots. 5,000 roots plant an acre.*

Planting should be delayed until all danger of frost is over. Dwarfs are earliest and most hardy. In garden culture, beans are usually planted about 2 inches deep in rows 20 inches apart, and 3 inches apart in the row; in field culture, drill rows 20 to 30 inches apart to cultivate with tractor. Until blossoming season, frequent but shallow cultivation should be given. Deep cultivation after the plants show bloom is very apt to ruin the crop. Do not disturb plants when covered with dew. One pound will plant 100 feet of drill, and sixty pounds is sufficient for one acre of dwarf bush types. Allow 50 foot row per person. To afford a regular succession of crops throughout the season, plant every two weeks after the first planting until midsummer. Minimum soil temperature of 60 degrees Fahrenheit at 4 inch depth.

### BUSH VARIETIES

#### **BUSH BLUE LAKE 156 PVP Item # 14B**

Did very well in our trials. A Bush Blue Lake type with typical Blue Lake firmness. Does well as a home garden or canning and freezing type. Has delivered good yield under drought stress. Has a high resistance to bean common mosaic virus. Approx 6 inches long, #5 sieve size, medium green pods.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.20 | 5 Lb. \$4.00 | 25 Lb. \$3.80 | 50 Lb. \$3.70**

**BUSH BLUE LAKE 274 Item # 10B**

AAS A real flavor treat! Finest quality tender pods 5 1/2 - 6 inches long to form. Vigorous, somewhat spreading plants. Makes heavy yields particularly later in the season. Used as fresh beans for canning. Popular for market.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.10 | 5 Lb. \$3.90**

**| 25 Lb. \$3.80 | 50 Lb. \$3.70**

**BUSH KENTUCKY WONDER 125 P.V.P.****Item # 12B**

True Kentucky Wonder flavor on a good, strong bush. Very productive plants about 20 inches high with pods borne well off the ground.

Flattened medium green pods 6-7 inches long are less fibrous with a good shelf life. For home, market and shipping. White colored seed.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.10 | 5 Lb. \$3.90**

**| 25 Lb. \$3.80 | 50 Lb. \$3.70**

**IMPROVED TENDERGREENS Item # 42B**

(Mosaic Tolerant) Provides the delicious quality of original Tendergreen without susceptibility to mosaic. Plant medium large, erect, and holds up well when loaded with pods. Compared to Tenderlong 15 is slightly later; yields more heavily over longer period, with more slender and darker pods. Pods about 6 inches long, rich green color, and the best of tenderness and rich flavor. Canning, shipping, freezing. Dark speckled seed.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.10 | 5 Lb. \$3.90 | 25 Lb. \$3.80 | 50 Lb. \$3.70**

**JADE Item # 21B**

A favorite by many. Strong, upright bush plants produce long, round, straight pods with excellent flavor and color. Pods average 3/8" x 7" and are easy to pick. Tolerant to bean mosaic, curly top and rust.

**Postpaid Pkt. \$2.00 | ½ Lb. \$6.30**

**Non Postpaid 1 Lb. \$5.60 | 5 Lb. \$5.40 | 50 Lb. \$5.00**

**JADE II (PVP) Item # 26B**

Improved Jade with darker green color. Long straight 6 1/2 to 7 inch pods with white seed. Very good farm market and home use. Tolerant to common bean mosaic, curly top and virus and rust resistant.

**Postpaid 100 Seeds \$2.00 | 1 M. \$7.00**

**Non Postpaid 5 M. \$33.30 | 10 M. \$63.30 | 50 M. \$300.70**

**ROMA II Item # 55B**

**60 Days** Italian Flat stringless bean that holds flavor extremely well after processing. This light colored bean is an Italian gourmet classic and a favorite among market gardeners.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.20 | 5 Lb. \$4.00 | 25 Lb. \$3.80 | 50 Lb. \$3.70**

**SLENDERETTE Item # 63B**

A green bean of Blue Lake Quality, it is an excellent yielder. 5 inch dark green pod with white seed. Tolerant to Bean Mosaic Virus Race NO 15.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.10 | 5 Lb. \$3.90 | 25 Lb. \$3.80 | 50 Lb. \$3.70**

**TOPCROP Item # 69B**

Resistance to common bean mosaic, low fiber content, and consistently out yielding varieties heretofore considered tops make this the quality stringless green pod bean. Suited to canning, freezing, market, moderate distance shipping, and excellent for home use. Pods, medium green, length 6 inches, diameter 3/8 inches. Brown seeds.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.10 | 5 Lb. \$3.90 | 25 Lb. \$3.80 | 50 Lb. \$3.70**

**BROAD BEANS**

**FAVA BROAD WINDSOR Item # 20B**

Flat broad glossy green pods measure 8-10 inches long. Plants average 24-36 inches. Seed is greenish brown with black eye.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.70**

**Non Postpaid 1 Lb. \$4.10 | 5 Lb. \$3.90 | 25 Lb. \$3.80 | 50 Lb. \$3.70**

**LIMA "BUTTERBEANS"**

**FORDHOOK 242 BUSH LIMA Item # 70B**

AAS. The same high quality as the old Fordhook but consistently yields better, especially in hot, dry weather. Plant has greater foliage and spread. Pods: bright green, broad, thick, 4 inch length, carrying 3 to 4 plump seeds of greenish tinged cream in color. The best bush Lima. For canning, shipping and freezing.

**Postpaid Pkt. \$2.00 | ½ Lb. \$5.80**

## CABBAGE

1 oz. of seed to 3,000 plants – 1/4 lb. per acre transplanted.  
Seeded direct, 2 lb. per acre.

Cabbage may be grown in all parts of the United States and special directions regarding the time and methods of planting applicable to all localities cannot be given. In general north of the 40th parallel the early sorts should be sown very early in hotbeds, hardening off gradually by exposing them to the night air and transplanting as early as hard freezing weather is over, setting 10 to 36 inches apart, according to the size and variety. South of the 40th parallel sow about the middle of September or later, according to the latitude, transplanting to cold frames if necessary to keep through the winter and setting in open ground as early as possible in the spring. It is important that the plants should not be shaded or crowded in the seedbed or they will run up weak and slender and will not stand transplanting well.

Cabbage should be hoed or cultivated every week, throwing up a little earth to the plants until they begin to head when they should be thoroughly cultivated and left to mature. Loosening of the roots will sometimes retard the bursting of the full grown heads.

Stand the plants upright in a cool cellar with roots in the sand or store in pits or trenches, roots up. If pitted, cover with a layer of straw, then with soil. Thickness of the cover will depend on weather conditions. The pits should be in a well-drained soil. Thickness of the cover will depend on weather conditions. The pits should be in a well-drained soil and some ventilation given though the soil covering to the straw by means of a pipe or tile. Minimum soil temperature of 40 degrees Fahrenheit at 4-inch depth.

## CORN – SWEET

Plant 1/4 lb. for 100 feet of row, 8 to 12 lb. Per acre. The fresher sweet corn is, the better the flavor. Plant for succession, using some of the extra early, early and main crop varieties. A month to six weeks later plantings of early sorts may be made for late use. We suggest plantings of Corn seed at 10-day intervals until July 1st is this latitude. If white and yellow corns are planted adjoining, cross-pollination will cause the ears to produce some off-color kernels. Do not plant sweet corn near field corn. It is better to use three or four short rows instead of one long one. Transfer of pollen is better resulting in more desirable ears. Warm weather, moderate moisture and rich soil are desirable, but most garden soil will do if worked deeply and thoroughly before planting. Wait until the ground is warm to avoid the seed rotting. Rows may be spaced 2 1/2 to 4 feet apart. Use a wider planting for taller varieties. In drills, plant 5 to 6 seeds to the foot; in hills, 5 to 6 seeds per hill. When plants are about 5 inches tall, thin to 6 to 12 inches apart. Cultivate well and keep free from weeds. Use manure that has been aged at least 1 year and plow in deeply. Minimum soil temperature of 55 degrees Fahrenheit at 4 inch depth.

### Sweet Corn Terminology

Su = Sugary Se= Sugar enhanced (sweeter) Sh2= Supersweet (sweetest) Se x Su= Heterozygous (Heterozygous hybrid varieties tend to have better cold emergence in most but not all cases).

## CUCUMBERS

### **Growing And Marketing Cucumbers**

Cucumbers thrive best in a very rich, loamy soil, not containing too much sand. A rather heavy soil is preferable to sandy soil. If available, fertilize heavily with barnyard manure, scattered evenly over the surface 2 or 3 inches deep, disced thoroughly, plowed under and thoroughly harrowed and floated. If commercial fertilizer is used, this will vary according to your soil's needs.

You can plant with drill rows 3 to 5 feet apart, 3 lb. of seed per acre, covering about 1 inch. Minimum soil temperature of 60 degrees Fahrenheit at 4 inch depth. Cultivate often. When the plants have 4 to 6 leaves thin to one plant every 18 inches. Keep the cultivator going as long as you can get through the rows. If under irrigation, water once a week lightly and always cultivate between irrigations until crop is laid by. Keep the cucumbers picked off as fast as they reach the size desired; if any are allowed to ripen, the plant ceases to set on more fruit.

### How to Grow Lettuce

The most favorable conditions for growing lettuce are rich soil, plenty of moisture, and steady growth from the time the seeds are planted until time for use. Seed germinates quickly and may be planted as

soon as the cold wet days of spring are past (minimum soil temperature of 35-40 degrees F at 4 inch depth). Sow about 15 to 18 seeds to the foot of row to depth of not more than 1/2 inch in the 18 - 20 inch rows. Leaf lettuce may be thinned 4 inches apart.

When growing head lettuce, it is necessary that the heading season take place during cool weather. For this reason it is a good policy in sections where hot weather sets in early in the season to sow the seeds in boxed indoors or in hotbeds and set out as early as weather conditions permit. If this is not practical, seed may be sown in the open ground as early as soil and weather conditions are favorable. This 12 inches apart in the row and give thorough cultivation. As side dressing of nitrate of soda, given as soon as the plants have made some growth, will be found beneficial.

Here at Rocky Ford a late planting is made about the first week of August, which produces excellent head lettuce for late fall shipment.

**MELONS – CANTALOUPE**

**Growing Cantaloupes**

**Plant 2 lb. per acre in drills or 1 lb. if hand planted in hills 1 oz. to 100 hills. Plant 1 inch deep.**

The land should be sandy loam, avoiding both too sandy and too heavy soil. If possible, do not plant where cantaloupes were grown previously within three or four years. A heavy stubble plowed under is one of the first locations. Bean land is usually very good. The first year after alfalfa or clover is not good as a rule because the melons grow to soft and are irregular in size, shape, nettings and quality. The second year after alfalfa or clover is usually very good. Fall plowing is best, followed in the spring with several discing.

If planted in hills the rows should be 5 to 6 feet apart each way. Cross cultivating improves the yield, quality and earliness. Plant ten to twelve seeds to the hill about 2 inches deep and thin to one or two plants when they have 5 or 6 leaves. Cantaloupe seed needs to have a minimum of at least 60 degrees Fahrenheit within the top 4 inches of soil to have a good germination. If drilled in rows 5 to 6 feet apart thin to one plant every 3 to 4 feet. Hoe carefully around the plants; keep free from weeds and cultivate often. We have found 8 or 10 cultivations at least should be giving and more would be better. After

**Powdery Mildew Resistant #45**

the vines reach so far across the row that you can no longer cultivate, the ends of the vines should be carefully turned back and an additional cultivation given. Cultivate shallow close to the plants and deeper farther away. Deep cultivation will cut the roots and damage the crop.

The main spread of roots is on the harder ground under the plowed ground. For this reason plowing should be 8 to 10 inches deep and cultivation by knives or sweeps rather than shovels.

If under irrigation, cantaloupes should be watered regularly about every two weeks. Early in the season furrows should be close to the plants and water should be allowed to run just long enough to moisten the soil beyond the plant row. Later furrows may be kept farther away from the plants. Do not allow the water to remain in the furrows to long so that the soil becomes waterlogged. Continue irrigating through the ripening season to keep the vines thrifty. Do not water after fruit reach softball size or larger as this can cause the fruit to rot. Adequate bee population is necessary for good pollination and fruit set.

Our business has been closely associated with the cantaloupe industry. Since the first green-fleshed, Rocky Ford's were shipped from our hometown, our catalog has carried the continued story of the improvement in varieties of shipping cantaloupes.

**We are determined that our cantaloupe seed be of the best obtainable.  
Burrell's Seeds has been producing cantaloupe seed for over 100 years.**

## OPEN POLLINATED CANTALOUPE

### **BURRELL'S JUMBO (JUMBO HALE'S BEST) Item # 49K**

**82 Days** | The original stock of Hale's Best produced some very fine melons that were exceptionally well adapted to roadside market selling and for bulk hauling in trucks. They were so extremely large, however, that they were hardly as well suited to packing in crates as some of the smaller types. By critical selection we produced a uniform type of this having a distinct stripe or suture running from stem to blossom end. It is a big melon; the average weight from our seed fields being about 4 1/2 lb. each, which would mean that the melons pack nine or less to the Jumbo flat crate. Well netted between the distinct suture, practically no ribs. Flesh is thick, deep salmon, flavor sweet and of fine eating quality. 6 x 7 1/2 inches.

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.20 | ¼ Lb. \$7.90 | ½ Lb. \$12.00**

**Non Postpaid 1 Lb. \$14.40 | 5 Lb. \$13.70 | 25 Lb. \$13.10 | 50 Lb. \$12.50**

**EDEN GEM (Rocky Ford Green Flesh Item # 29K)**

**92 Days** | A green fleshed Rocky Ford type, slightly oblong, solidly netted, very firm and highly resistant to rust. A good shipper melon. Packs 15 to the standard flat crate. Flesh green, deep, fine grained and sweet.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.90 | ¼ Lb. \$8.10 | ½ Lb. \$12.40**

**Non Postpaid 1 Lb. \$15.20 | 5 Lb. \$14.50 | 25 Lb. \$13.80**

**POWDERY MILDEW RESISTANT #45 Item # 93K**

**85 Days** | The variety most used in the Rocky Ford District as it may be vine ripened, picked full slip and stand shipment to distant points. Quality is among the best of the very long distant shippers, but must be vine ripened. Flesh salmon, firm, fine textured and sweet. Our strain produces more uniform melons than what is generally offered as this variety. 5-6 inches, 4-4 1/2 lbs.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.40 | ¼ Lb. \$7.10 | ½ Lb. \$10.60**

**Non Postpaid 1 Lb. \$12.00 | 5 Lb. \$11.40 | 25 Lb. \$10.90 | 50 Lb. \$10.40**

**TOPMARK Item # 107K**

**90 Days** | A Western shipping variety with sweet, deep salmon flesh and small seed cavity. Oval fruits have heavy netting, without suture, and a tough rind to protect against bruising. May be picked at 'full slip' stage of maturity. Melons measure 5 x 5 1/2 inches and weigh 3-3 1/2 lbs. Sulphur tolerant.

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.50 | ¼ Lb. \$9.30 | ½ Lb. \$14.60**

# MELONS – WATERMELON

## Growing Watermelons

Select a well-drained sandy loam, new sod land is best; or good loamy soil, which is well drained, is good. Heavy soils waterlog easily and subject melons to ground rot. Plow deep and harrow well to make a fine seed bed. A liberal coat of manure disked in before plowing will increase the size and yield.

Watermelon seed needs to have a minimum of at least 60 degrees Fahrenheit within the top 4 inches of soil to have a good germination.

Cultivate shallow next to, and deeper away from the plants using knives or duck feet, being careful not to cut roots. Permanent irrigation furrows should be formed early to avoid serious root damage.

It is sometimes desirable to turn the ends of the runners when they begin to reach across the row and give an extra cultivation. This should be done carefully so as not to damage the small melons. Melons grown in areas subject to extreme temperature should be protected from the sun's rays by covering them with their own vines to avoid sunburn.

Consult a reliable agricultural chemical firm, your county agent or a successful grower in your area about fertilizer. Watermelons require considerable nitrogen and it is believed adequate phosphate reduces breakage.

DO NOT PLANT on land where melons were grown before, even if four or five years before, if you have a good land. The vines remove something from the soil not readily replaced, and following crops may produce deformed melons with black ends or shriveled ends, even from the best of seeds. Ground previously in alfalfa is ideal because of high nitrogen content. Sometimes the first set will produce some ill shaped or black end melons. These should be cut from the vines, allowing more shapely melons to set on. Watermelons sometimes produce blackened fruits on ground following sorghums. Melon cutting is very important and the best growers, when necessary, go through the field two or three times to cut off deformed melons when they are small. Pruning of vines however, is often detrimental.

Do not press on melons to see if they are ripe. A slight thump with the finger, if the sound rings clear and a high tone, indicates a green melon; if a hollow dead tone, the melon is ripe. With a little practice you can tell by the color. A bright growing color indicates a green melon; a dull green indicates ripeness.

Stems should be cut as close to the melon as possible. Protruding stems become hard and often puncture adjacent melons in shipping. The best harvesting procedure is to pick melons in the evening and load in the morning when they are cool. Regardless of conditions, over ripe melons should never be loaded.

Harvest labor should be thoroughly trained in careful handling of the melons. Bruised melons or broken skin will result in rot while in transit and a reduction in your profit. See that the truck or car lining is smooth. Never walk on the melons. Bed well.

**CAUTION! Some selective herbicides commonly used on corn will destroy melons when planted on land where these materials have been applied the previous year or two. You need at least one strong hive of bees for every two acres to allow adequate pollination. Inadequate pollination can cause low fruit set and/or misshapen fruit.**

*Plant about 2 lb. seed per acre – 4 oz. to 100 hills.*

## OPEN POLLINATED

### ALL SWEET *Item # 1L*

**90 Days** | Outstanding quality of Crimson Sweet and more. Long cylinder shape, averages 25 lb. and can top 40 lb. Unique rind coloring, having light and dark green broken stripes. Fine shipper with long shelf life. Ripeness best determined by yellowing that develops on bottom side. Don't pick too soon! Flesh bright red, high in sugar. Small dark seed with few per melon, but a pound sows twice as far as Charleston Gray. Tolerant to Fusarium Wilt and Anthracnose races 1&3. Released by Department of Horticulture, Kansas State University.

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.50 | ¼ Lb. \$9.20 | ½ Lb. \$14.30**

**BLACK DIAMOND Item # 24L**

**92 Days** | A vigorous productive melon, used throughout the south for long distance shipping. Fruits average large specimens of 40 to 60 lb. when well grown. Shape is nearly round with flattened ends. Rind medium thick, very tough and hard; deep bluish-green with practically no variation in color. Flesh deep red, crisp, and when full ripe fairly tender and full flavored. Our stock of this is the Texas Giant Strain, the best in eating and shipping quality of this type of melon. If you use this variety from any other source, whether satisfied or not, plant a portion of your crop to our seed of this for comparison. Seed large, mottled, dark brown.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.40 | ¼ Lb. \$7.10 | ½ Lb. \$10.50**

**CHARLESTON GREY #133 Item #36L**

**85 Days** | A leading shipper. Relatively high in resistance to Anthracnose, Fusarium Wilt, and sunburn; superior long-oblong shape, high productivity and adequate size (35 lb. or larger) prove its value, especially since it's of such good eating quality and greys are traditionally good shippers. Flesh is red and delicious. Well grown, the melons show no hollow heart or gourd-neck. Seed dark brown. More uniform with more wilt resistance than regular Charleston Grey.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.90 | ¼ Lb. \$8.00 | ½ Lb. \$12.30**

**Crimson Sweet**

**CRIMSON SWEET Item # 11L**

**85 Days** | Rarely have we seen a variety create so much excitement among watermelon growers and seedsmen. Fruits are attractive light green with dark green stripes and the shape is blocky-round. Flesh is deep red, firm and fine-textured with excellent sugar content. Average weight is 25 lb. but under favorable

conditions some melons will

reach 40 lbs. or more. Has small dark brown seeds and produces far fewer than most varieties. They are so small the seeding rate measured by pounds per acre can be half of that of other varieties. Vigorous vines with resistance to Anthracnose and Fusarium Wilt. A fine breeding accomplishment by Dr. Charles V. Hall, KSU, Dept. of Horticulture. Stock Seed WFB Tested.

**TRIPLOID VARIETIES**

**TRIPLOID SEED GERMINATION AND EMERGENCE**

Triploids may experience germination emergence problems if soil temperatures are below 80 degrees F. Since most soil temperatures are colder than 80 degrees when watermelon is planted, seedless watermelon has the reputation of having lower germination than standard watermelon. Frequently, this is just a matter of soil temperature. Consequently,

the use of transplants is recommended, though direct seeding is successful under some conditions. Transplants should be grown in cells or peat pellets and not as bare-roots. Soil temperatures should be maintained at a minimum of 80 degrees, but preferably closer to 85 degrees within the top 4 inches of soil. If possible, bottom-heat is preferred as a means of maintaining a more constant temperature of the planting medium.

Planting medium should be pre-irrigated thoroughly and left to drain 4 to 6 hours before planting. If possible, the plant tray should be covered with plastic to prevent cells from drying out during germination and to help warm the planting medium in cold climates. Plastic covers also can help reduce cooling of the medium by evaporative cooling in hot climates. Do not allow the growing medium to become dry. If necessary, apply water by overhead sprinkling, but do not over water. Also, keep in mind that irrigation water frequently is colder than 80 degrees and will cool the medium below optimum temperatures for germination.

### CROSS-POLLINATION

Pollen from a diploid (pollinator) watermelon is necessary to pollinate female flowers of the triploid to set fruit and stimulate fruit enlargement (cross-pollination). Crimson Sweet and Allsweet seem to work well as pollinators. Cross-pollination is most easily accomplished by sequencing rows of standard (diploid) watermelon across a field of seedless watermelon. The most common pattern of standard vs. seedless is a ratio of 1:2; that is planting one row of standard then two rows of seedless followed by one row of standard, etc. across the field. While the 1:2 ratio is most common, some growers have been successful with ratios of 1:3 rows or 1:4 rows. Also, some growers have been successful in planting the diploid pollinators in the same row as the triploids, using 1:3 or 1:4 ratios.

When choosing and planting a pollinator hybrid, it is important to select one that has fruit which is distinguishable from the seedless fruit, that it produces marketable fruit, and that it produces male flowers for the entire time that female flowers are produced by the seedless watermelon plant. Some growers plant two pollinators, an early and a main season maturity, to ensure having adequate pollen over an extended period of time. Honeybees are the most effective means of pollinating watermelon. Since cross-pollination is essential for fruit set, it is critical that adequate numbers of bees are available. The number of bee hives necessary to provide good pollination varies with conditions, but a commonly used ratio is one strong hive for every one to two acres.

## MUSTARD

### FLORIDA BROAD LEAF *Item # 393MD*

**50 Days** | Large vigorous growth; leaves green, broad-oval with distinct whitish midrib, margin toothed but not frilled; seeds reddish-brown.

**ONIONS****How to Grow Onions**

*Plant the best seed obtainable as cost is small compared with results. 1 oz. to 100 feet of drill, three to five pounds per acre, except Sweet Spanish and like sorts, 1 ¼ to 2 ½ pounds.*

**THE SOIL**

A crop of onions can be grown on any soil which will produce a full crop of corn, but on a stiff clay, very light sand or gravel neither a large nor a very profitable crop can be grown. We prefer a rich loam with a slight mixture of clay. This is much better if it has been cultivated with hoed crops, kept clean from weeds and well-manured for two years previous, because if a sufficient quantity of manure to raise an ordinary soil to a proper degree of fertility is applied at once, it is likely to make the onion soft. The same result will follow if sown on rank, mucky ground or on that which is too wet.

**FERTILIZING**

There is no crop in which liberal use of manure is more essential and it should be well rotted. Rank, fresh manure is liable to result in soft bulbs with many scallions. See your county agent or some successful onion grower or fertilizer distributor for amount and kind of commercial fertilizer to use.

**SOWING THE SEED**

This should be done as soon as the ground can be made ready. Here at Rocky Ford we plant from Feb. 20 to April 1 when the soil temperature is at least 35 F. A good hand seed drill will do an excellent job of planting. Growers of large acreages here plant with the 4 to 6 row beet drills, using special plates. This permits cultivating with tractor cultivators. The drill should be carefully adjusted to sow the desired quantity of seed about one inch deep. The quantity needed will vary with the soil, the seed used and the kind of onions desired.

Thin seeding gives much larger onions than thick seedings. 2-2 1/4 pounds of seeds per acre is sufficient for very large sorts like Sweet Spanish and as much as 5 or 6 pounds per acre can be sown of the smaller sorts. Use a drill with a roller attached, but if the drill has none, the ground should be well rolled with a light roller immediately after the seed is planted. It is impossible to cultivate the crop economically unless the rows are straight. 12 seeds planted per foot of row requires about 1 3/4 - 2 lb. per acre.

### **CULTIVATION**

As soon as the onions are large enough so that the rows can be seen, begin cultivating very shallow and as close to the rows as possible without damaging the plants. Cultivate every week to ten days until the bulbs have started to develop.

Here a special weeder made from clock spring with handle, is used for removing grass and weeds from the row (listed page 79). Do not cover the onions with soil when hoeing or cultivating.

If under irrigation, irrigate every week to 10 days, until the crop is matured or up to 10 days before harvest. Here we irrigate 12 to 14 times and cultivate 10 to 12 times. Furrows must be large enough to irrigate without flooding. Flooded onions will not bulb properly.

### **GATHERING**

As soon as the tops die in the fall, the bulbs should be pulled and about four rows put together in each windrow. As soon as the tops are dried, cut about one-half inch from the bulb with shears and put into field crates. Stack crates in piles of about one truckload each and protect top crates from weather. When thoroughly cured, run over grader, sort out scallions and damaged bulbs and store in onion house. Stack so that the best of ventilation is assured. Keep dry and as near uniform temperature just above 320 F, as is possible. Repeated freezing and thawing will spoil the bulbs. Moving frozen onions will ruin them. Wait until thawed if caught by freeze. Very early onions are grown by the transplanting methods, the seed being sown in frames or beds, and the small onions transplanted when the size of small lead pencil, to the field rows.

The tops of some Sweet Spanish Onions remain green right up until time it is necessary to harvest. The onions may then be pulled and allowed to remain in windrows long enough for drying down the tops. Plant about 2 lb. seed per acre -- 4 oz. to 100 hills.

## **YELLOW VARIETIES**

### **BURRELL'S YELLOW VALENCIA – IN PRODUCTION *Item # 589N***

**115-120 Days** | AAS. Our own special selection and introduction. Its outstanding qualities are full globe shape, deep bronze color, large size, and with vigorous tops that are slow to ripen down and withstand thrips well. Probably the largest and heaviest yielding strain of Sweet Spanish yet offered. Keeps well and an excellent shipping sort.

Don't confuse our Burrell's Yellow Valencia with Sweet Spanish offered by others. Locality where grown and our special stock have a great deal to do with its thrips resistance and hardness.

**Postpaid Pkt. \$2.00 | 1 Oz. \$6.10 | 1/4 Lb. \$14.00 | 1/2 Lb. \$23.30**

**Non Postpaid 1 Lb. \$35.00 | 5 Lb. \$33.30 | 25 Lb. \$31.70**

### **CANDY HYBRID *Item # 22N***

**102 Days** | Produces jumbo globe bulbs. Golden color for direct seed or transplant.

**Postpaid Pkt. \$2.75 | 1 Oz. \$32.60**

**SWEET SPANISH COLORADO NO.6:****TREATED SEED ONLY! Item # 59N**

**115-120 Days** | Developed by the Colorado Experiment Station from Burrell's Yellow Valencia. Probably the best keeper of the Sweet Spanish Type. Here at Rocky Ford the No. 6 keeps until late winter and shipped to markets throughout the nation. Very deep, almost bronze color, in fact the color is darker than any Sweet Spanish we have grown. Outer skins thick and the color carries through the several outer layers. Globe shaped at 3 1/2 - 4 inches diameter. If not familiar with this strain we suggest that you try it in comparison with what you are now using; especially if keeping quality, deep color, and thrips resistance are desired.

**Postpaid Pkt. \$2.00 | 1 Oz. \$6.10 | ¼ Lb. \$14.00 | ½ Lb. \$23.30**

**Non Postpaid 1 Lb. \$35.00 | 5 Lb. \$33.30 | 25 Lb. \$31.70**

**TEXAS GRANO 1015Y Item # 219N**

**165 Days** | A sweet variety that gets sweeter the bigger it gets. The large flattened yellow bulbs have been known to weigh up to a pound! Fair storage capabilities. Some Pink Root tolerance.

## BUNCHING VARIETIES

### CRYSTAL WHITE WAX (PEARL ONION) *Item # 21N*

**60-180 Days** | At 60 days bulbs average 1/2 - 3/4 inch, at 90 days 1 inch, will get larger the longer it is left in the ground. Waxy white color, flesh is course and mild. Good for green bunching onion or as a pearl onion for pickling. Short storage life.

**Postpaid Pkt. \$2.00 | 1 Oz. \$6.90 | ¼ Lb. \$16.40 | ½ Lb. \$27.50**

**Non Postpaid 1 Lb. \$42.70 | 5 Lb. \$40.60 | 25 Lb. \$38.60**

### EVERGREEN *Item # 46N*

**60-120 Days** | Also called Nebuka or Japanese Bunching. A great green onion variety for salads and relish trays. Produces clusters of 4 to 9 long, slender, silvery shanks. Non-bulbing, slow bolting, hardy, and winters well. Leek-like stalks divide continuously. White skin, no need to strip for market. Can plant in Spring or Fall. Pink Root, Thrips and Smut. Great for roadside market and home garden.

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.60 | ¼ Lb. \$12.40 | ½ Lb. \$20.20**

**Non Postpaid 1 Lb. \$29.40 | 5 Lb. \$28.00 | 25 Lb. \$26.60**

### TOKYO LONG WHITE BUNCHING *Item # 201N*

**65 Days** | A farm market favorite and great for the home garden! This Japanese bunching onion produces slim stalks 16 to 28" when mature. Pink Root resistant

**Postpaid Pkt. \$2.00 | 1 Oz. \$5.70 | ¼ Lb. \$12.70 | ½ Lb. \$20.90**

**Non Postpaid 1 Lb. \$30.60 | 5 Lb. \$29.10 | 25 Lb. \$27.70**

### WHITE BUNCHING (W LISBON) *Item # 84N*

**60 Days** | A special selection used for bunching or stripping. Slow to bulb and mild in flavor. Makes a beautiful white onion with slender blue-green tops.

**Postpaid Pkt. \$2.00 | 1 Oz. \$6.90 | ¼ Lb. \$16.40 | ½ Lb. \$27.50**

**Non Postpaid 1 Lb. \$42.70 | 5 Lb. \$40.60 | 25 Lb. \$38.60**

## PARSLEY

*For market, the leaves may be tied in small attractive bunches. Very desirable for garnishing, or if to be used for flavoring, the leaves may be dried crisp, rubbed to a powder and kept in bottles. The seed is very slow to germinate and the same method as used for starting parsnip seed should be followed. The soil temperature should be at least 400F. Plant 1/2 oz. to 100 feet of row, or 3 lb. per acre to a depth of not more than 1/2 inch. Rows may be one or two feet apart and the plants should be thinned 4 to 8 inches apart in the row. Cutting the leaves often will improve their quality.*

### EVERGREEN *Item # 484PR*

**70 Days** | Strong growing with large, dense, dark green foliage. Compound leaves or fronds; leaves rather coarsely cut but closely curled. Definitely more frost resistant than other varieties. Very uniform. Well adapted to both market and home garden.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.10 | ¼ Lb. \$6.50 | ½ Lb. \$9.40**

**Non Postpaid 1 Lb. \$9.80 | 5 Lb. \$9.40 | 25 Lb. \$9.00**

### MOSS CURLED *Item # 485PR*

**75 Days** | First introduced in our 1904 catalog! Plants compact with very dark green leaves, exceedingly fine cut and curled, resembling tufts of moss. Desirable for flavoring, garnishing and for decorative purposes.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.40 | ¼ Lb. \$7.10 | ½ Lb. \$10.60**

**Non Postpaid 1 Lb. \$12.00 | 5 Lb. \$11.40 | 25 Lb. \$10.90**

**PLAIN OR ITALIAN Item # 486PR**

**75 Days** | Better flavor than curled types. Large flat leaves. Most popular for cooking.

**Postpaid Pkt. \$2.00 | 1 Oz. \$3.90 | ¼ Lb. \$6.10 | ½ Lb. \$8.70**

**Non Postpaid 1 Lb. \$8.50 | 5 Lb. \$8.10 | 25 Lb. \$7.70**

**TRIPLE CURLED Item # 482PR**

**68-75 Days** | Leaves are closely curled, nutritious, bi-annual. Grown mostly as an annual - fast growing, and uniform.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.10 | ¼ Lb. \$6.40 | ½ Lb. \$9.20**

**Non Postpaid 1 Lb. \$9.40 | 5 Lb. \$9.00 | 25 Lb. \$8.60**

**PARSNIPS****HARRIS EARLY MODEL Item # 27Y**

**100 Days** | An earlier type that is very productive. Roots are 3 1/2 inches at shoulder and taper less abruptly than Hollow Crown, to a length of 10 - 12 inches. The skin and interior is white, tender and of best quality. Grow enough to serve your table from after frost to late spring.

**Postpaid Pkt. \$2.00 | 1 Oz. \$4.00 | ¼ Lb. \$6.30 | ½ Lb. \$9.10**

**Non Postpaid 1 Lb. \$9.20 | 5 Lb. \$8.80 | 25 Lb. \$8.40**

**PEAS****FREEZONIAN (WILT RESISTANT) Item # 33P**

**62 Days** | Developed specially for quick freezing from Thomas Laxton; having its famous quality and dependability, combined with huskier vines and bigger yields. Has tender, clinging skin which doesn't peel or loosen in freezing. Remains in edible condition on vine a couple days longer than some. Vines 2 1/2 feet; pods 3 1/2 inches, blunt ended, 6 - 8 peas. Highest quality for home garden, canning and freezing.

**Postpaid Pkt. \$2.00 | ½ Lb. \$6.20**

PEPPERS

How to Grow Peppers

The number of days given is the average time from setting of plants until picking of marketable green peppers (plants set latter part of May). Direct seed 1/8 oz. for 100 feet of row or about 2 lb. per acre. 4 oz. seed produces enough plants to transplant one acre.

Sow the seed to a depth of about 1/2 inch in hotbed 8 to 10 weeks before time to transplant in open field. Pepper requires more heat than tomato and we have found it advisable to soak the seed for a few hours in warm water. Then spread between damp cloths kept in a warm place until sprouts begin to appear. Plant without delay.

It is desirable that pepper plants be grown in beds by themselves so that the temperature may be held at a higher degree than necessary for tomato or cabbage.

Set out the plants after the ground is thoroughly warm with a minimum temperature of 60F. Rows may be up to 3 feet apart and plants 15 to 20 inches in the row, depending on the variety.

## TOMATO

In many areas tomato seed is drilled in the field at the rate of 1/2 to 2/3 lb. per acre: planting depth about 1/2 to 3/4 inch. The stand is thinned to same spacing as when transplanted. Use one ounce of seed for 2,000 to 3,000 plants. 1/8 oz. will sow 100 ft. of row seeded direct. Seed may be treated with Arasan for disinfecting.

Seed may be planted in the hotbed or in flats in the greenhouse about six weeks before transplanting to the field. For small gardens plants may be started in a shallow box. When seedlings reach height of about one inch they may be transplanted into larger boxes, hotbed or cold frame and spaced 4 inches apart.

Blocking will cause the roots to branch and hold the soil together so plants can be moved without disturbing roots. Plants should be 4 inches apart both ways allowing the soil to be cut with a knife between the plants. About 10 days before setting out, the first cut is made midway between the plants in one direction only. Three days later cut the other direction to divide soil into squares. Water heavily after each cutting.

Transplant small vine varieties 4 x 4 feet and those with large vines 5 x 5 feet or more. (Chart on back of catalog gives required plants per acre.) In transplanting use care in taking up plants to avoid injury. Harden plants by letting them get quite dry a day or two before pulling but apply abundance of water a few hours before transplanting.

Ground should have a minimum temperature of 50F. If possible, avoid transplanting on a hot day or immediately after rain. Apply ample water to each plant as it is set and if needed apply additional water for several days. Set plants deep (about two-thirds of the stem).

One copious watering is better than many sprinklings. Avoid sprinkling leaves while they are exposed to bright sun. Too much watering or rainfall during growing season may result in excessive vine growth and light sets of fruit.

## OPEN POLLINATED

## How to grow Zinnias

*Plant after frost danger is past. Grow away from trees and shade. Rows should be 3 feet apart for Giants and 2 feet apart for Lilliputs. Sow 15 seeds per foot of row at a depth of 1/2 inch and keep moist until plants are up. Thin Giants 12 to 15 inches apart and Lilliputs 8 to 10 inches. Cultivate and water frequently. Thorough application of dusting sulphur when plants begin to bud helps avoid mildew.*

*TRANSPLANTING: If you have difficulty making plants live after transplanting to your garden, try moving in a ball of moist earth containing one or several plants and taking care not to disturb the roots. Use trowel or transplanting fork. Keep shaded and water from hose in fine mist should then be applied for several hours to discourage wilting.*

*(A) Sow in the bed, border or row where the plants are to grow.*

*The soil should be loamy, full of humus to the extent that it will easily pulverize, not dry out readily and crack. Make certain that you have good topsoil, not fill-in from the basement excavation. A load or two of good topsoil hauled in and well-fortified with humus -- leaf mold, peat moss, well-rotted manure or composted organic material -- may mean the difference between pride of accomplishment and envying your neighbors' more attractive flower bed. Nearly all flowers do well in sunny location; see page 60 for list of those that do well in partial shade.*

*Spade to a depth of 6 inches, pulverize and rake smooth. Plant in rows or broadcast the seed. Cover lightly to a depth four or five times the seed's diameter. Very small seeds may be merely pressed into the soil with a flat board and a very little soil and pulverized sphagnum or peat moss sprinkled over them. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause*

*the seed to rot, sour the soil, or cause "damping-off." Use a fine spray that will not wash out the seed. When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.*

*Cultivate shallowly so as to not damage roots. Hotheouses set close together over the seed row will give protection and force growth of plants.*

*(B) Sow in outdoor seedbed, to be transplanted. Same as (A) except bed should not be over six feet wide for easy tending and always sow seeds in rows. Keep soil moist until plants are up. A thin dressing of peat moss covering soil surface will help. Place in full sun, protect from winds and, in the case of perennial seedlings, provide a lath or cloth canopy for shade during heat of summer. This should be removable in damp or cloudy weather. Seedlings may be transplanted when they make true leaves, that is, when the second pair of leaves appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seedbed to a nursery row, to grow until fall before being moved to their permanent location.*

*(C) Sow in cold frame or in protected or lath shaded spot that can be kept moist and undisturbed over a long period. This method is used for slow germinating seed, some of which requires months to sprout. Plant as in (B) preparing soil as in (A). During the spring, summer and fall, water often enough to prevent soil from drying out. A mulch of peat or pulverized sphagnum moss will help retain moisture. In winter to afford protection, cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.*

*(D) Sow indoors in boxes or flats. These should be of convenient size and about 3 inches deep. The soil used should be composed of about equal parts of leaf mold, sharp sand and good garden soil. The bottom of the flat may be covered with a layer of coarse gravel, broken pots or some such material, and the prepared soil finely sifted to fill up the balance of the box within about an inch of the top. Saturate with boiling water and let dry for 24 hours or until the right texture for making shallow furrows in which to plant the seed. Place in a window where exposed to the sun and cover with a pane of glass to retard evaporation. 1/4 inch layer of sphagnum moss over soil will conserve moisture and retard damping-off. Water carefully with a fine spray, keeping the soil moist but not wet. Remove the glass after the plants are up. Or cover with wet paper which should be kept wet until seeds germinate, then promptly remove the paper. Some flower seeds are very slow to germinate, so be sure to allow sufficient time without disturbing soil. Too much watering will result in tall, weak plants. When the seedlings are large enough to handle, about four leaves, they should be transplanted one inch apart in another bed, flat or in small pots (paper pots are excellent for this purpose), later to be reset in open ground. For blocking plants see page 57 under "How to grow Tomatoes".*

*(E) Sow in hotbed. This is the best way to start plants that are to be transplanted if greenhouse is not available. We recommend use of Gro-Quick Electric Seed Bed Heater. Call for information and pricing on this exceptional heater. Prepare soil as in (A) and sow is in (B).*

*(F) Time of planting. March or early spring.*

*(G) Time of planting outdoors. After all danger of frost is over and the soil is warm.*

*(H) Time of planting indoors, or under glass. March or very early spring for transplanting after danger of frost is over.*

*Blooming period of most flowers can be greatly extended by frequent evening irrigations. There is a tendency to "go to seed" if soil becomes dry.*
